

The Main Basis of Education - Education

Ergasheva Mukhlisa Abdullayevna

Termiz State Pedagogical Institute Primary education I stage student

Annotation: In this article, the main basis of the concept of education, which has become the most important problem, which is the main basis of society, which concerns everyone equally, the reforms that are being carried out for its development and the stages of proper education are discussed.

Keywords: Education, society, family, neighborhood, concept, decision, development, mature, staff, stages, foundation, foundation, perfection.

The wide-scale fundamental reforms implemented in the social-economic and spiritual-educational spheres in the modernizing Uzbekistan are highly recognized in the eyes of all the public.

It is clear to all of us that the main key to any development is education and upbringing. High goals can be achieved only through the quality of education and upbringing. It is difficult to imagine education without education and its development.

So, when we think about education, education (in Arabic soz bòlib) means development, growth. The concept of "education" in a broad sense refers to the entire continuous system of social relations that affects a person's acquisition of social experience. We can say that the process of education is one of the main global problems today, because in the period of psychophysiological changes of the young generation and as a result of education without paying attention to the youth, we can face various problems. Under the influence of the present and the future, educating with the correct explanation of the main basis of development is the main task facing our country! It is clear that a wonderful question arises in the process of education, that is, "in which area, institution, in which group of people does education develop?"... These thoughts can be taken as an answer. A parent who sincerely wants to wear crowns of thanks through his own eyes does not entrust his child's upbringing to anyone, that is, he brings up the basic upbringing processes in the family, based on the words of his mother, his father's advice, and the narrations of enlightened elders. He gets it from his parents, from his parents, from his enlightened grandmothers and grandfathers, whose faces shine brightly. He gets the most important concepts such as manners of speaking, walking and standing, dressing culture, mutual respect, kindness, thrift, and ease in the family and as a cornerstone for his life. It is not for nothing that our wise people said, "In a bird's nest, you can protect yourself." The quality of the upbringing process puts a high responsibility on the shoulders of parents. The child is the pillar of the family. The strength, beauty, and "radiation" of this pillar depend first of all on the environment created by the parents and family members, on the upbringing and air the child breathes. Like parents, neighborhood, neighborhood, school, circle of friends, and social environment play an equal role.

The child begins to keep the education he received at home on the street, in the circle of friends, and at school he learns that he should keep in mind all aspects of his actions, such as the correctness of his actions, not to get bored, and cooks his heart. School education has a special role in a child's life. In today's advanced age, this process is taking root as a large-scale reform. Also, the task of the education system in educational institutions today is to raise the young people who are patriots, who

have acquired modern knowledge, skills and skills, to take their place in the society, and to grow up into a perfect generation that strives for high perfection.

It is clear that a wonderful question arises in the process of education, that is, "in which area, institution, in which group of people does education develop?"... These thoughts can be taken as an answer. A parent who sincerely wants to wear crowns of thanks through his own eyes does not entrust his child's upbringing to anyone, that is, he brings up the basic upbringing processes in the family, based on the words of his mother, his father's advice, and the narrations of enlightened elders. He gets it from his parents, from his parents, from his enlightened grandmothers and grandfathers, whose faces shine brightly. He gets the most important concepts such as manners of speaking; walking and standing, dressing culture, mutual respect, kindness, thrift, and ease in the family and as a cornerstone for his life. It is not for nothing that our wise people said, "In a bird's nest, you can protect yourself." The quality of the upbringing process puts a high responsibility on the shoulders of parents. The child is the pillar of the family. The strength, beauty, and "radiation" of this pillar depend first of all on the environment created by the parents and family members, on the upbringing and air the child breathes. Like parents, neighborhood, neighborhood, school, circle of friends, and social environment play an equal role.

The child begins to keep the education he received at home on the street, in the circle of friends, and at school he learns that he should keep in mind all aspects of his actions, such as the correctness of his actions, not to get bored, and cooks his heart. School education has a special role in a child's life. In today's advanced age, this process is taking root as a large-scale reform. Also, the task of the education system in educational institutions today is to raise the young people who are patriots, who have acquired modern knowledge, skills and skills, to take their place in the society, and to grow up into a perfect generation that strives for high perfection.

A child, who received elementary education as a variety of ornaments, when he reaches school age, turns them into a solid mold into a wonderful quality that can give a beautiful and elegant appearance. This process is formed in the elementary school. At that time, every child under education needs a teacher who has enough knowledge for him, who strives for perfection, who can give his best. That is why today the head of our state is paying attention to teachers, primary school teachers, their educational process, principles, education. paying special attention to the methods and stages and creating a wide range of conditions.

The main attention is focused on the future teachers who are studying at higher educational institutions. Various changes and comprehensive innovations are being introduced to their education system. One of them, we can say to future elementary school teachers, teaching subjects such as "Methodology of teaching educational subjects", conducting various conferences with their participation, and not ignoring the free opinions of students (specifically regarding the educational system).

In this pure land, where all conditions are created, it is impossible not to be educated, to develop without education. That is why measures are being taken on all fronts, including changes, developments, and various issues related to the life and education of young people.

In order to consistently carry out the education process in the classroom-lesson system, the concept of "Education" subjects, adopted in 2019-2020, includes high goals that have been universally accepted.

This law was established gradually this year, i.e. in 2019-2020 for elementary grades, and in 2020-2021 academic years for upper grades. In addition, it was adopted on September 23, 2020, "The main goal of the Law on Education is to comprehensively organize the education system, to provide

proper and solid education as a foundation, and as a result, to make effective use of the wide range of conditions provided and created by this law." We can say that the law is comprehensive and introduces many different directions for learning and development, education, and that the society and the state will be managed by young people who have received solid and reliable education.

On December 31, 2019, the Cabinet of Ministers of the Republic of Uzbekistan announced Resolution No. 1059[1] on "Approving the Concept of Continuous Spiritual Education and Measures for its Implementation"[1], which established the concept of continuous spiritual education consisting of 8 chapters and 70 points. added.

A number of adopted laws are all based on the integrity of education and upbringing. First President of the Republic of Uzbekistan Islam Abduğaniyevych Katimov, education and upbringing are like two wings of a flying bird. They emphasized that if one of its wings is broken or twisted, the bird will not be able to fly immediately, without education, we cannot develop education.

In this society, where the most advanced information technologies of the 21st century are entering, where factories are starting to work, it is impossible to be left behind, as we said above, without education. The third renaissance is expected to be created, established, and elevated by the young generation of young people who are knowledgeable, intelligent, clever, intelligent, mature in all aspects, have a pure heart, restrained ego, patriotic, selfless, and possess human qualities.

It is difficult to imagine tomorrow without today and without yesterday. To learn from the past, not to leave today helpless, and to create tomorrow in a mature way, we should all act today, work tirelessly, seek, educate children correctly, and irrigate their minds with the works of Eastern scholars, if necessary. we need to conquer the universe!!!

To promote nationalism, not to forget the past, to teach the young people that the highest feeling in the human heart is kindness, because as the great poet Alisher Navoi said, "The greatest, highest quality in a person is his humanity", that it is our duty to educate and receive, that humanity was born. We can give good education through high feelings such as not being able to live alone, having a wide observation, and having a good relationship with people.

In conclusion, it should be said that today's peaceful land, peaceful life, clear sky, our borders are inviolable, independent, all opportunities have been created more than we wanted, the peace and health of our motherland, which passed many trials in the beginning, yesterday is full of examples and advice, and today is full of gratitude. It is worth giving countless thanks for our country, we should take care of the soil of such a country, be selfless children for it, get proper education in our time, give if necessary, sing the anthem of the country, and lay the foundation for its flag to fly high. And is a must. The children of such a great country, free citizens in all respects, and children of mother earth covered with flowers in every corner are a happy miracle created by nature itself!
