

# The Factor of Using Interactive Teaching Methods in the Development of Speech of Primary School Students

## B. D. Haydarova, N. I. To'ymurodova

Masters's Student, Bukhspi, Bukhara

Abstract: The article discusses the use of different interactive methods for primary classes.

**Key words:** Linteractive method, method, visualization, cooperative learning, inquiry-based instruction.

Education of young people as free-thinking, innovative and well-rounded people is carried out from the primary grades; this process is one of the important tasks. For this reason, the content of education is being radically updated. In the period of junior school age, the child's motives for independent education appear, and they arise in the simplest form - with the acquisition of knowledge, along with the interest in additional resources and reading books on various topics.

Education is a cooperative activity of the teacher and students, and in this process, the development of the individual, his education and upbringing is also realized. In lessons, the teacher conveys his knowledge, skills and abilities to students through exercises, and students acquire the ability to use them as a result of mastering them. In the process of learning, students use different forms of learning, that is, they rely on specific differences in receiving, processing and applying the information being learned. In the course of education, issues of education and upbringing are solved in the form of cooperation between teachers and students during classes, independent work of students, extracurricular activities.

The purpose of education is formed according to the needs of society. Therefore, the goal of education should be appropriate and proportionate. The goal of education in scientific literature is to create skills and competencies, develop logical-creative thinking, improve communicative literacy, inculcate the national idea, form oriental education, define personality it is emphasized that it consists of spiritual enrichment. Based on the educational goal, students' communication culture is improved by increasing their independent thinking, oral and written literacy, and developing logical thinking. On the basis of the educational goal, spiritual, ideological and sophisticated education is provided. In the process of language learning, there is an opportunity to get closer to the cultural and moral values of the people.

One of the great sages said, "If you live with anxiety about the future, give your children a good education and teach them." It would not be wrong to say that the reforms implemented in the education system in our country are not a work aimed at achieving results in one or two years or in a short period of time, but in the true sense, it is a change that will last for several hundred years. This shows that our president cares about our future, our future generation, and the idea that all the children of our country - my children, they should be stronger, more educated and definitely happier than us - is a wise policy.

It is known that the implementation of advanced pedagogy and new information technologies in education not only increases the effectiveness of training sessions, but also in the education of an independent and logically thinking, well-rounded and highly moral person by applying the achievements of science in practice. is important. Today, the interest in using interactive methods and information technologies in the educational process is increasing day by day.

One of the reasons for this is that until now, in traditional education, students were taught only to acquire ready-made knowledge, and the use of modern technologies allows them to search for the knowledge they acquire, independent study and thinking, analysis. even teaches them to draw final conclusions themselves. In this process, the teacher creates conditions for personal development, formation, learning and upbringing, and at the same time performs the functions of management and guidance.

It gives a positive result if it is used to repeat game-tasks in lessons or in reinforcement lessons.

The choice of which type of game-task depends on the type of lesson, the level of training of students to perform games-tasks, their level of knowledge, opportunities for independent creative work, the ability to quickly restore what they have learned in memory, and the degree to which creativity is formed. Should be

In education, attention is focused on the issue of teaching the student to think, to understand the opinion of others and to be able to express this opinion in oral and written form. takes place. The way of life, cultural creativity of the nation is studied on the basis of its rich historical heritage.

Today, the teacher is required to use advanced pedagogical and new information technologies in the educational process. Based on the above, based on our experiences, we present our thoughts on the ways of education by using interactive methods in the lessons. We believe that it will provide practical help to our colleagues in improving the effectiveness of training sessions. Also, it becomes one of the close assistants of students in fulfilling the responsible task of choosing their direction and forming the skills of preparation for independent life. Below we give recommendations on the implementation of modern methods of teaching based on certain topics in the class section. You use it in a creative way and try to find an answer to the question of our first president: "What are we doing today to instill in our children feelings of pride, pride, and devotion to our mother, who is sacred for every age?" We hope that you will contribute to the achievement of the intended goal by implementing modern methods of education and upbringing in response to their opinions.

When teaching students in primary grades, especially in the first grade, it is necessary to take into account the age, physiological and psychological characteristics of the student. The use of game technologies in education is one of the most effective tools. During the game, their thinking, outlook, and thinking will expand. Scientists believe that the game approach to education facilitates the learning process. It not only makes it easier, but also increases the interest in this subject and encourages the child to acquire deep knowledge. Game-style lessons help children develop their oral language. First graders really like different visuals with pictures or videos. Games should be regularly used to develop their speech through different colored pictures. For example, games such as "What is this?, Who is this?, Who knows the most words?" It is necessary to pay attention to the principle of individualization of education when presenting the topic with the help of a computer.

We know that in the current educational process, the student should be the subject. Focusing on more interactive methods will increase the effectiveness of education. One of the most important requirements for today's classes is to teach independent thinking. Today, teachers should study the experience of foreign pedagogues and use innovative methods and new pedagogical techniques.

Some of the best teaching methods that can be implemented in elementary schools are:

#### 1. Visualization

Bringing boring scientific concepts to life through visual and hands-on learning experiences, helping students understand how they apply in real life

### 2. Cooperative learning

Encourage students who are able to work together by encouraging small group or whole class activities.

### **3.** Instructions upon request

Encouraging students to ask questions and explore their own ideas can help them improve their problem-solving skills and deepen their understanding of scientific concepts. Both are important life skills.

Participating in regular professional development programs is a great way to improve a teacher's teaching skills.

Being an effective teacher is not an easy task because every student is unique, but by using a combination of instructional strategies, teachers can take into account the learning styles and knowledge potentials and abilities of the students in the classroom. it is necessary to create a dynamic and motivational environment.
