

Interactive Methods of Teaching Foreign Languages

Davletova Shalola Bahodir qizi

Intern teacher at the English faculty N1 Department of Integrated skills N1

Uzbekistan State World Languages University

Abstract: *The most reason of the utilize of intelligently strategies in separate learning of outside dialects is to include understudies within the prepare of dynamic learning, to assist them create information and investigate abilities. Intuitively strategies are based on the dynamic relationship between instructor and understudy, full understanding of each other. The extreme objective of the presentation of intuitively strategies within the learning handle is to organize the interaction of the educator and the understudy within the classroom, in any case of the shape of the lesson.*

Keywords: *distance learning, interactive method, theoretical basis, different opinion, question, learners.*

Intuitively instructing permits such kind of instructing in which understudies appear dynamic inclusion within the learning prepare to retain the greatest sum of data and information from their instructors. Instructors utilize diverse ways to include understudies within the intuitively instructing strategies and for the most part it's from.

Great teachers are those who motivate their students to take up the tasks positively, perform it in a better way and give positive and desired outcomes. The quality of a good teacher involves being observant, and responsive, nimble and encouraging. They should always work with an open mind, so that they will be able to encourage their students in a better and productive way. Teachers should try out different interactive learning styles in the interactive session of the classroom.

The same old lecture style teaching is not interesting anymore as it often bore students in the classroom. Students are losing their interest in this type of teaching. Instead they are taking interest in interactive teaching styles for creating an atmosphere of attention and participation to make it likable, enjoyable and interesting. Interactive teaching methods make teaching exciting and fill it with fun, the focus of interactive educational teaching styles should be on:

Encourage students to take more participation.

- Introduce such questions that expect stimulating response, discussion, and a hands-on experience.
- Use such teaching methods that press for answers, and capture the attention of students.
- They should work under a set up workgroup environment.
- Teachers should involve themselves as well as the student in the learning process.

Interactive teaching styles

The following are the most effective ways to engage your students through interactive teaching methods and interactive teaching styles:

Brainstorming

Brainstorming is one of the interactive teaching methods which demand performance in group sessions. With this process, students are able to develop creative thoughts and ideas. The method helps learners to pull learn together.

Types of interactive brainstorming:

- ✓ Online interaction such as chat, forums and email
- ✓ Team-idea mapping
- ✓ Group passing
- ✓ Individual brainstorming
- ✓ Structured and unstructured
- ✓ Reverse or negative thinking
- ✓ Nominal group relationships
- ✓ Think, pair and share

First, when applying the interactive teaching style, you will need to frame a question or a problem then the need to pair your students will arise. Assign a question to each group and allow them to reach to the conclusion in a sufficient time. At last, you allow each one from the pair to draw the conclusion in their personal voice.

You can ask each one to explain the conclusion or you can ask one student to explain the concept and another to explain what they learnt. With this way, students will show communication with other students.

Buzz session

In the Buzz session, a single topic is allotted to the participants and they are asked to come together in groups to explain the concept. The group participation allows each member of the group to represent their thoughts and ideas equally. It helps to boost encouragement among the students within each group. Students will learn to learn from everyone's experiences and get advantage of everyone's ideas.

Another method of teaching grammar is to incorporate interactivity into lessons. Using games to teach grammar not only engages students but also helps them to remember what they've learned. This method allows teachers to tailor their lessons to the different learning styles of students. For instance, each student can be given a large flashcard with a word on it, and the students must physically arrange themselves into a proper sentence. Other games can include word puzzles or fun online quizzes.

Over the years, many methods have been developed for teaching grammar and have been built upon, abandoned, or combined, all with the same goal in mind—teaching students how to communicate effectively and understand how to use the English language. Because of the grammatical complexity of English, each method has its pros and cons. Some lessons are less likely to be remembered, while others may require more in-depth explanation and practice. Regardless of how grammar is taught, a well-rounded understanding of English grammar is the most important factor in improving the literacy of students.

Incident process

This Interactive teaching method is a case study method with a few dissimilarities from the core case study format. It is not as rigid as full case format training. The main aim of introducing

Incident Process in teaching methods is to learn how to solve real problems. It involves real people who make students prepare for life beyond the limitations of classrooms.

Question & Answer sessions

The interactive teaching method is really helpful for seeing students' participation. Once you introduce the topic to the students in the classroom, do not start lecturing on it. Instead, ask each student to write down their question on a small paper regarding the topic. Then collect all the cards, mix them up, and then start Question & Answer sessions.

Exit slips

Use this interactive teaching method to check the activeness of students during the class. You can apply this method at the end of the class session. Once you finish the lecture session, ask students to write on a specific question only for one minute. It could be any general question such as "what was the most important thing you learned today". Read what your students have written and if you find it necessary, you can open up a conversation about it in your next session of the class.

These are a few interactive teaching methods you can introduce in the classroom to make the teaching interesting, informative, and engaging for students.
