**Abstract:** *This article talks about the use of modern innovative technologies and methods in foreign language teaching, their effectiveness, and methods and methodology of foreign language teaching in technical directions.*

**Keywords:** *method, methodology, innovative methods, foreign language, technique, technology, use of ICT, popularization of foreign language.*

In our country, every year, several areas of science are selected and developed with special attention. Among them, foreign languages are designated as such priority areas. Uzbekistan's policy of openness, its active entry into the world market, and the expansion of international cooperation in all fields increase the need to know foreign languages.[1] Any goal arises out of necessity. The concept of goal means a planned result, an imagined result. To the question of why a foreign language is taught in educational institutions, one can answer that they learn a foreign language for practical, educational, educational and developmental purposes.

As in other educational subjects, in the process of learning a foreign language in technical areas, the educational institution of educating students is considered one of the main tasks. Loyalty to Motherland, to nature Inculcating positive characteristics such as love, respect for people, doing good, striving for justice, international feelings occupies an important place in learning a foreign language.

Educational goals are a social order - a task, focused on the formation and education of a comprehensively developed person. There are three meanings of the term "methodology", which is often encountered in pedagogical communication. The first one indicates the subject of study (for example: "the first lesson tomorrow is methodology"), the second one is a set of methodological methods of education (for example, "I like our teacher's methodology"), and the third one is the theory of education and special represents science (for example, "the methodology is well covered in this manual"). Acquiring the achievements of foreign language teaching methodology in secondary general education schools creates the following opportunities for students:[2]

- prepares a thorough theoretical ground for future professional activities;
- thoroughly introduces modern methods, organizational forms and tools of education;
- creates skills and qualifications for the student to be able to effectively apply the acquired methodical knowledge in practice;
- they help creatively apply the theoretical knowledge and practical skills they have acquired from all subjects in school education[2].

The methods used practically in the process of teaching a foreign language in technical areas mainly consist of three parts:

- dating;

- exercise;
- apply.

These three the term is used by different names in methodological studies. Most recognized and direct observation in teaching these possible methods from the point of view of the student named The task of the student in learning a foreign language is a foreign language. Familiarity with the material, skills and practice for the purpose of skill formation and one's own opinion it consists of using language during the presentation, that is, in speech communication.

When it is considered as a foreign language teaching system in technical education fields, then two sides - the teacher and the learner participate. The responsibility of the teacher organization of the student's learning activity – organizational task is assigned. The teacher organizes all three tasks performed by the student - familiarization, practice, application. From the lesson In addition, creating skills and competencies related to independent work is also part of the teacher's organizational task.

The use of different tables in the process of teaching a foreign language in technical education the effect is high. Students are known to use tables in the educational process a grammatical rule, such as making sentences using tenses, is new can place words.

At a time when there is a high need to learn a foreign language in technical education, in the educational process productive of modern information technologies, innovative educational technologies use makes this process effective. Innovative education the effectiveness of technologies in their educational process is correct and effective when used.

Foreign language teaching in our republic, knowledge of foreign language teachers and according to the recommendations of the European framework for the assessment of skills (CEFR). New methods and requirements were developed. According to him, general education schools and textbooks were created for students of vocational colleges. Complies with these requirements classrooms with stands and new information and communication techniques equipped. The demand for learning a foreign language is increasing day by day.

Foreign language science is divided into four aspects (reading, speaking, listening and speaking) separate concepts and skills are given for each of them. Education technologies, it is productive of modern information technologies in the educational process is to use. Also modern innovation in the educational process means to increase the quality and efficiency of education by introducing new technologies holds In particular, such information and communication in learning a foreign language. There are several advantages of using technology. Language learning and the role of modern technology in teaching is incomparable. From technological means use every aspect of learning a foreign language (reading, writing, listening and understanding to speak). For example, to listen and understand, of course, a computer, player, This process is impossible without CDs. Listening comprehension language is one of the most important parts of learning. In this, the student is at the same time the speaker's pronunciation, adherence to grammatical rules, vocabulary and his it is required to pay attention to its meanings. Modern in the educational process students are also informational and communicative in the use of technologies good knowledge of technologies and the ability to use them is an important factor.[7]

It is best to teach and learn a foreign language using modern technologies in technical fields is one of the best methods.

In this process, including:

- when using computers, the student watches videos in a foreign language, watching and listening to demonstrations, dialogues, movies or cartoons possible;

- listen and watch foreign language radio broadcasts and television programs can be done;
- from tape recorders and cassettes, which are considered a more traditional method use;
- CD players can be used. This is the use of technical means making the process of students learning a foreign language more interesting and effective ensures that[9].

In conclusion, the use of ICT technologies, innovative methods and interactive methods in teaching a foreign language in technical fields as a result, students' logical thinking skills develop, speech become fluent, the ability to answer quickly and correctly is formed. Such methods makes the student eager for knowledge. The student should prepare thoroughly for the lessons strives.
